

SafePointe® Ground Truth

Security Staff Challenges

Security staff managing weapons detection systems face the critical responsibility of protecting both people and property. To stay ahead of emerging threats and evolving best practices, they need easy access to detailed alerts and summary metrics—like visitor volume, alert counts, and more—at their fingertips. These insights not only help enhance safety but also enable teams to streamline processes and create a smoother, more welcoming experience for visitors.

Smarter, Data-Driven Decisions

Armed with these statistics stored in the InSight application, security teams can make smarter, data-driven decisions to refine their approach. For instance, switching from visual inspections to wand searches may lead to more effective weapon detection. By analyzing metrics holistically, teams can test and adapt strategies to boost accuracy while enhancing the overall visitor experience.

Introducing SafePointe's Ground Truth Feature

With SafePointe's Ground Truth feature, security staff can log and track every item, detail, and interaction outcome at a scene. This includes:

- ✓ Weapons found
- ✓ Other items found
- ✓ Screening method
- ✓ Location of the weapon/item on the person
- ✓ Person type (such as employee personnel or patient, in a hospital setting)
- ✓ Interaction outcome (for monitoring customer experience)
- ✓ Screening timer to assess how long the screening process takes
